

BATTERY CARTS & CARRIAGES

WALKIE TRANSFER CARRIAGE

MODEL WTC

- *Convert your existing pallet truck into an efficient portable battery changer*
- *Offers dependable and versatile battery handling changing system at an affordable cost*

Note: Shown with optional WTC-FP, Fork Pocket.

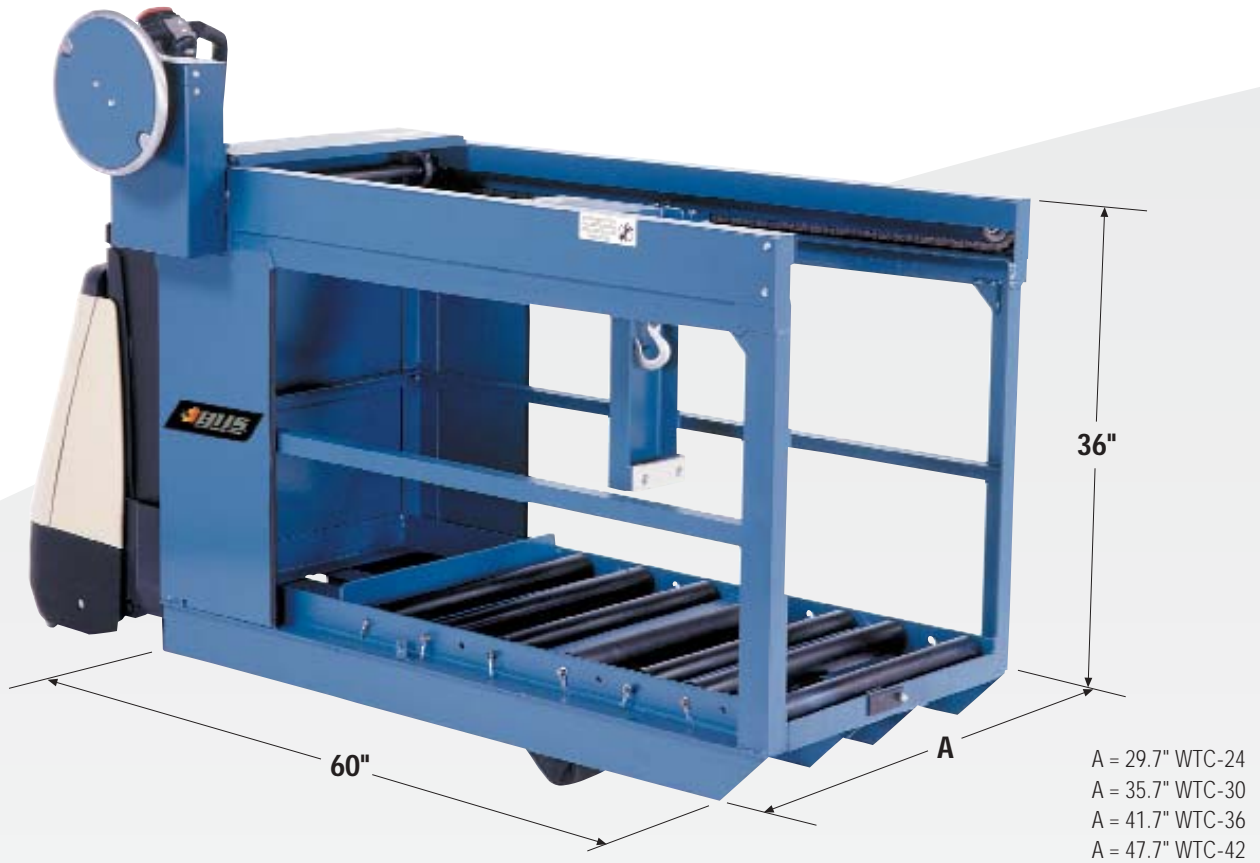

BATTERY HANDLING SYSTEMS

WALKIE TRANSFER CARRIAGE

MODEL WTC

- WTC-24 with extractor shown. Does not include pallet truck.
- Extractor extension 6" beyond unit standard.

*Pallet truck sold separately
Note: Shown with optional WTC-FP, Fork Pocket.

FEATURES & BENEFITS

- **Heavy duty frame construction built to handle today's demanding environments**
- **Mounts easily to any powered pallet truck**
- **Simple design, helps to make repair and maintenance easy**
- **Large 2.4" diameter rollers standard**
- **Hook and chain extraction**
- **Hand wheel for positive control of the push/pull extractor arm**
- **Polycoated rollers, less corrosion build-up, lasts longer**
(see model specifications)
- **7 compartment rollers standard**

Fork Pocket Option (WTC-FP-C)

Standard Hook & Chain

Hand Wheel

Drop-In Rollers

WTC OPTIONS

The WTC offers many flexible options to meet your unique battery changing system requirements.

Mounting Options

Permanent Mounting

The WTC can be permanently welded to a pallet truck. *(recommended)*

Bolt-on Mounting

Bolting is the answer when the pallet truck may be required occasionally for other tasks.

Fork Pocket Mounting

The fork pocket option is available for pallet trucks or fork lifts that are not dedicated to battery changing tasks. The quick disconnect option is recommended for this method of mounting. *(please specify pallet or lift truck when ordering)*

Low Profile

The WTC can be modified from its 6-1/2" standard roller height to meet unique profile requirements. It is easily designed to extract from as low as 5.5" to accommodate lower style lift trucks.

High Profile

The base can be elevated up to 24" to meet high battery compartment needs.

BATTERY CARTS & CARRIAGES

WALKIE TRANSFER CARRIAGE

Extended Reach Cantilever

Extended Roller Compartment

Two-Tier Roller Compartment

Rubber Bumpers

Rubber bumpers can be installed on the WTC to protect your lift truck fleet.

Extended Reach Cantilever

An extended reach cantilever can be installed for outrigger clearance to reach an additional 7" beyond the WTC base for a total of 13".

Extended Roller Compartment

An extended roller compartment is also available to provide an extended bed of up to 8".

Two-Tier Roller Compartment

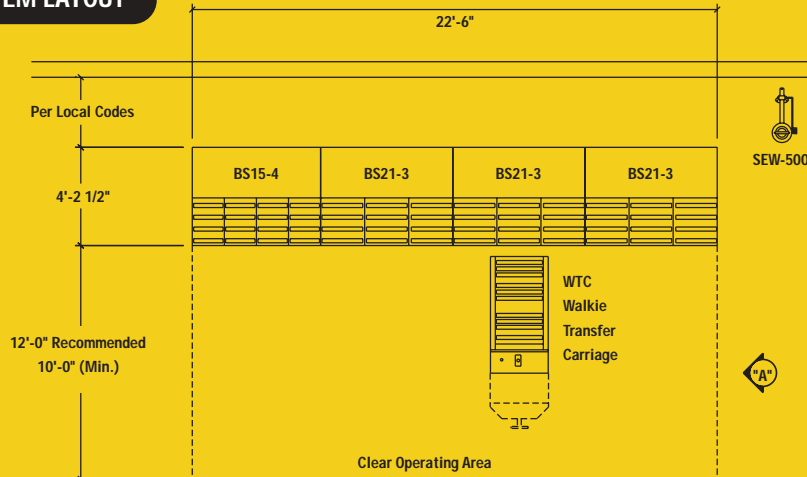

The Two-Tier roller compartment provides two roller levels in one unit. This is handy when your facility has narrow aisle trucks as well as sit

down counter balance trucks. It provides a single unit change out system for all applications.

Drop-in Rollers

When the Two-Tier option is not feasible and multiple battery height extraction is required, a Drop-in Roller may be the answer for batteries that are higher than the pallet truck range.
